

Accounting

for Odoo 20 Community Edition

Setting the books up, recording the daily work, reconciling the bank, running the reports and closing the period — with the complete Odoo Mates accounting suite.

Contents

Fourteen parts, from an empty database to a closed period.

1 Before you start

- 1.1 What this app installs
- 1.2 Who can do what
- 1.3 Finding your way around

2 Setting the books up

- 2.1 The order to do it in
- 2.2 Chart of accounts
- 2.3 Journals
- 2.4 Outstanding accounts, and the In Payment state
- 2.5 Accounting settings
- 2.6 Fiscal years and periods

3 Opening balances

- 3.1 What you need before you start
- 3.2 Posting the opening entry
- 3.3 Opening the bank
- 3.4 Opening the assets

4 The daily work

- 4.1 Customer invoices
- 4.2 Vendor bills
- 4.3 Journal entries by hand
- 4.4 Payments
- 4.5 Post-dated cheques
- 4.6 Recurring payments
- 4.7 Printing cheques

5 Bank and cash

- 5.1 Importing the statement
- 5.2 Building a file map for your bank

- 5.3 Reconciling the bank
- 5.4 Match Journal Items
- 5.5 Cash

6 Assets

- 6.1 Asset categories
- 6.2 Creating an asset
- 6.3 Posting depreciation
- 6.4 Assets that already existed
- 6.5 Asset reports

7 Budgets

- 7.1 Budgetary positions
- 7.2 Creating a budget
- 7.3 Following a budget
- 7.4 Stopping the overspend
- 7.5 Budget control of purchase orders

8 Getting paid: follow-ups

- 8.1 Follow-up plans
- 8.2 Working the list
- 8.3 Customer statements

9 Cash forecast

- 9.1 Expected items
- 9.2 Running the forecast

10 Currencies

- 10.1 Multi-currency basics
- 10.2 Rates that update themselves
- 10.3 Revaluing at the closing rate

11 Closing the books

- 11.1 Lock dates
- 11.2 Closing a period

11.3 Closing a year

12 The reports

- 12.1 Where they are
- 12.2 Statement reports
- 12.3 Partner and audit reports
- 12.4 Daily reports
- 12.5 Dashboards

13 Routines

- 13.1 Every day
- 13.2 Every month
- 13.3 Every year

14 When something looks wrong

- 14.1 The usual suspects
- 14.2 Getting help

Before you start

1.1 What this app installs

Installing **Odoo 20 Accounting Community** turns the Invoicing application of Odoo 20 Community Edition into a full accounting application. It installs seventeen modules and arranges their menus, groups and dashboards so that they work as one:

- Financial reports (Balance Sheet, Profit and Loss, Cash Flow Statement, ledgers, aged balances, tax report)
- Day Book, Cash Book and Bank Book
- Asset management with depreciation boards
- Budgets, with actual and theoretical amounts
- Bank reconciliation and Match Journal Items
- Bank statement import (CAMT, MT940, OFX, QIF, CSV, Excel)
- Customer follow-ups and statements
- Cash forecast
- Cheque printing
- Automatic currency rates and currency revaluation
- Fiscal years, period closing and lock dates
- Recurring payments
- Eight spreadsheet dashboards

GOOD TO KNOW

One module is not installed for you. *Budget Control of Purchases* (`om_account_budget_purchase`) adds committed amounts and budget control on purchase orders. Download it from the Odoo Apps store and it installs itself as soon as Purchase and the budgets are both present. See section 8.5.

1.2 Who can do what

Accounting in Odoo is driven by two groups. Set them on each user under **Settings › Users & Companies › Users**, in the **Accounting** section.

GROUP	WHAT IT ALLOWS
Accountant <code>group_account_user</code>	Daily work: invoices, bills, payments, journal entries, reconciliation, the reports, assets and budgets.
Accounting Manager <code>group_account_manager</code>	Everything above, plus the configuration: journals, chart of accounts, fiscal years, lock dates, period closing, currency revaluation, and the right to post documents that go over budget.

TIP

Give the bookkeeper **Accountant** and keep **Accounting Manager** for whoever owns the period close. Several safeguards in this suite (lock dates, over-budget blocking, revaluation) exist precisely so that the two roles differ.

1.3 Finding your way around

Everything lives in the **Accounting** application. Its top menus are:

MENU	WHAT IS IN IT
Dashboard	The journal cards: bank, cash, sales, purchases, with what is left to reconcile.
Customers	Invoices, credit notes, payments, customers, products.
Vendors	Bills, refunds, payments, vendors.
Accounting	Journal entries, the journals, bank and cash statements, reconciliation, ledgers, assets, budgets, recurring payments and cash forecast items.
Review	What needs attention before closing.
Follow-Ups	The customers to chase, their plans and the analysis.
Reporting	Statement reports, partner reports, tax, audit reports, daily reports, management.
Configuration	Settings, journals, chart of accounts, fiscal years, closing, cheque formats, follow-up plans, statement file maps.

The Accounting menu, with the transactions, the journals, the reconciliation screens and the ledgers.

Setting the books up

2.1 The order to do it in

Work through this once, in this order. Each step depends on the one before it.

1. **Chart of accounts** — the accounts you will post to.
2. **Journals** — sales, purchase, bank, cash, miscellaneous.
3. **Taxes** — the rates you charge and pay.
4. **Accounting settings** — currencies, budget warnings, cheque formats.
5. **Fiscal years and periods** — the calendar your books close on.
6. **Opening balances** — what you owned and owed on day one.

2.2 Chart of accounts

Configuration › Accounting › Chart of Accounts.

Odoo installs a chart for your country when you pick the fiscal localisation in the settings. Do that first, then adjust it — it is far less work than building a chart by hand.

1. Open **Configuration › Settings**, find **Fiscal Localization**, choose your country package and save. Odoo loads the accounts, the taxes and the default journals.
2. Go through the accounts and set the **Type** correctly. The type, not the code, is what drives the reports: a Balance Sheet is built from the receivable, payable, bank, fixed asset, current asset, current liability and equity types, and a Profit and Loss from the income and expense types.
3. Mark the accounts that must be reconciled — receivable, payable, and any suspense or transit account — with **Allow Reconciliation**. Without it, those accounts will not appear in Match Journal Items.
4. Deprecate rather than delete the accounts you will not use: an account with entries cannot be deleted.

WATCH OUT

Account types matter more than you think. Every report in this suite — and every dashboard — is computed from account types so that it works with any chart of accounts. An expense account typed as a current asset will quietly disappear from the Profit and Loss.

2.3 Journals

Configuration › Journals. A journal groups entries of one kind and gives them their numbering.

TYPE	USE IT FOR	SET ON IT
Sales	Customer invoices and credit notes.	Default income account, sequence prefix.
Purchase	Vendor bills and refunds.	Default expense account, sequence prefix.
Bank	One per bank account.	Account number, default account, suspense account, cheque format, statement file map.
Cash	The till, petty cash.	Default account, suspense account.
Miscellaneous	Manual entries, payroll, depreciation, revaluation, opening balance.	Nothing in particular; keep one general journal for adjustments.

1. Create one bank journal per real bank account and write the **account number** on it. The statement import uses that number to find the right journal by itself.
2. Check the **suspense account** of each bank and cash journal. Reconciliation puts whatever is not yet matched there, so it should be an account you can see and empty.
3. Give each journal a short, distinctive **code**: it is what appears in the Day Book and the ledgers.

2.4 Outstanding accounts, and the In Payment state

Every bank and cash journal carries two tabs, **Incoming Payments** and **Outgoing Payments**. Each holds a payment method with an **Outstanding Account**, and that one setting decides whether an invoice becomes *Paid* when you register the payment, or waits in *In Payment* until the bank confirms it.

HOW YOU WORK	SET THE OUTSTANDING ACCOUNT TO	WHAT HAPPENS
You import and reconcile bank statements	A separate <i>Outstanding Receipts</i> and <i>Outstanding Payments</i> account.	Registering a payment puts the invoice In Payment ; reconciling the bank transaction with it moves the invoice to Paid . The bank account in Odoo only ever shows what the bank has confirmed.
You do not reconcile statements	The account of the journal itself — the bank account on the bank journal, the cash account on the cash journal.	The payment lands directly on the bank or cash account and the invoice goes straight to Paid . Nothing waits in an intermediate account, and there is no In Payment step.

1. Open **Configuration** › **Journals** and the bank journal.
2. On the **Incoming Payments** tab, set the **Outstanding Account** of each payment method.
3. Do the same on the **Outgoing Payments** tab.
4. Repeat on the cash journal, using the cash account.

WATCH OUT

Never leave the outstanding account empty. A payment registered on a journal whose payment method has no outstanding account is recorded and settles the invoice, but writes **no journal entry at all**: nothing reaches the books, and nothing appears in the ledgers or the open items. Whichever of the two setups you choose, the account must be filled in.

TIP

The first setup is the safer one, and it is why the In Payment state exists: it separates the money you have recorded from the money the bank has confirmed. Take the second only when you genuinely do not reconcile — a cash till that is counted rather than reconciled is the usual case.

2.5 Accounting settings

Configuration › **Settings**, section **Accounting**. The options this suite adds:

OPTION	WHAT IT DOES
Budget warnings	The share of a budget line at which the responsible is notified, and whether an email is sent when a budget is exceeded.
Block Documents Over Budget	Vendor bills and purchase orders over budget always warn; with this on, only accounting managers can post or confirm them.
Automatic Currency Rates	How often the rates are fetched and from which source. See section 11.
Currency Revaluation	The journal and the unrealized gain and loss accounts. See section 11.3.
Enhanced Financial Reports	Preview the financial reports on screen instead of downloading them.
Anglo-Saxon Accounting	Record the cost of a good when it is invoiced rather than when it is received.

The screenshot shows the Odoo Accounting settings page. The left sidebar has 'General Settings' and 'Accounting' options. The main content area is titled 'Accounting' and contains several sections: 'Analytics', 'Enhanced Financial Reports', and 'Anglo-Saxon Accounting'. The 'Analytics' section has two sub-sections: 'Budget warnings' and 'Block Documents Over Budget'. The 'Budget warnings' sub-section has a text description, a value of 90.00%, a percentage sign, and a checkbox for 'Email the responsible when a budget is exceeded'. The 'Block Documents Over Budget' sub-section has a checkbox and a text description. The 'Enhanced Financial Reports' section has two checkboxes: 'Preview financial reports without downloading' and 'Financial Reports in Excel'. The 'Anglo-Saxon Accounting' section has a checkbox for 'Anglo-Saxon Accounting' which is checked, and a text description.

The budget warnings and the blocking of documents over budget, in the accounting settings.

2.6 Fiscal years and periods

Configuration › Accounting › Fiscal Years.

1. Create the fiscal year with its start and end date. Most companies use the calendar year; if yours ends in March or June, set it here and every report that offers “this financial year” follows it.
2. Generate the **periods** — usually monthly. Periods are what you close one at a time during the year.
3. Leave the year open until everything is posted and reconciled; closing it is section 12.

Accounting Dashboard Customers Vendors Accounting Review Follow-Ups Reporting Configuration					My Company	
New	Fiscal Years		Search...		1-2 / 2	
☐	Name	Start Date	End Date	Status		
☐	FY 2026	Jan 1	Dec 31	Open		
☐	FY 2025	Jan 1, 2025	Dec 31, 2025	Open		

A fiscal year and the periods generated inside it.

Opening balances

3.1 What you need before you start

Opening balances are how the books you kept before Odoo become the books you keep in Odoo. Get them from your previous system or your accountant, dated the **day before** your first day in Odoo.

- A trial balance at that date: every account with its debit or credit balance.
- The list of **unpaid customer invoices**, one line per invoice.
- The list of **unpaid vendor bills**, one line per bill.
- The bank and cash balances, and the statement number you stopped at.
- The assets still being depreciated, with their purchase value and depreciation already posted.

3.2 Posting the opening entry

1. Create a dedicated **Opening Balance** account of type *Equity*, or use the one your chart provides.
2. Go to **Accounting › Journal Entries**, create an entry in the Miscellaneous journal dated the day before you go live.
3. Enter one line per account from your trial balance, debit or credit as it stands. Do **not** enter a single lump line for receivables and payables — see the next step.
4. For the receivable and payable accounts, enter **one line per open invoice or bill**, each with its partner and, in the **Due Date** column, the real due date. This is what makes the aged balances, the follow-ups and the cash forecast correct from day one.
5. Check that the entry balances, then post it.

TIP

Enter the open invoices as separate lines with their due dates even though it is more work. A single lump receivable line gives you a correct balance sheet and a useless aged balance, follow-up and forecast.

3.3 Opening the bank

Set the opening balance of each bank journal by entering the closing balance of your last paper statement as the **starting balance** of your first statement in Odoo. The bank line of the opening entry above and that starting balance must agree.

3.4 Opening the assets

Assets bought before you went live are entered in the Assets screen with their original purchase value and the depreciation already posted, so that only what is left depreciates in Odoo. See section 7.4.

The daily work

4.1 Customer invoices

Customers › Invoices. The cycle is always the same: draft, confirm, get paid, reconcile.

1. **New**, pick the customer; the payment terms and the receivable account come from their record.
2. Add the lines. The income account comes from the product, or from the journal if the line has no product.
3. Check the taxes and the **Due Date**, then **Confirm**. The invoice takes its number from the sales journal and the entry is posted.
4. **Send** it by email or print it.
5. When the money arrives, **Register Payment** (section 4.4) or match it on the bank reconciliation screen (section 6.2).

4.2 Vendor bills

Vendors › Bills. Same cycle, and two things worth watching:

- Put the vendor's own document number in **Bill Reference**. Odoo warns you if the same reference comes in twice from the same vendor, which catches most duplicate payments.
- If the bill goes over a budget line, a warning banner appears at the top. With **Block Documents Over Budget** on, only an accounting manager can post it (section 8.4).

4.3 Journal entries by hand

Accounting › Journal Entries. For payroll, depreciation entered manually, accruals, corrections and anything that is not an invoice, a bill or a payment.

1. **New**, choose the journal and the date. The date decides the period, so check it against your lock dates.
2. Enter the lines with their accounts, partners where relevant, and analytic distribution if you use analytics.
3. The entry must balance to the cent before it can be posted.
4. Post it. A posted entry can no longer be edited; correct it with a reversal instead (**Reverse Entry**), which keeps the audit trail intact.

The journal items, with the filters every accountant needs.

4.4 Payments

There are three ways to record money moving, and they end up in the same place.

WAY	WHEN TO USE IT
Register Payment on an invoice or bill	You know which document is being paid. The payment is created and matched with the invoice at once.
Customers / Vendors › Payments	A payment on account, a deposit, or several invoices paid at once.
Bank reconciliation	You are working from the bank statement rather than from the document. Section 6.2.

GOOD TO KNOW

A payment sits on the **outstanding receipts** or **outstanding payments** account until it is reconciled with the bank statement. That is deliberate: it is money you have recorded but the bank has not confirmed. The cash forecast counts it separately for the same reason.

4.5 Post-dated cheques

A cheque dated next month is not money in the bank yet. It should not sit in the bank account, and the invoice it settles should not stay open either. A journal of its own solves both.

Setting it up, once:

1. Create two accounts with **Allow Reconciliation** ticked: *Post-dated cheques received* (a current asset) and *Post-dated cheques issued* (a current liability).
2. Create two journals of type **Bank**: *PDC Received* and *PDC Issued*, each with the matching account as its own account.
3. On both journals, set the **outstanding account** of the payment methods to that same account, so nothing lands in an intermediate account on the way (section 2.4).

A customer pays you with a post-dated cheque:

1. **Register Payment** on the invoice with the journal **PDC Received**, dated the day you received it.
2. Write the cheque number and its due date in the memo — that is what makes the account readable later.
3. The invoice is settled and the amount sits in *Post-dated cheques received*, not in the bank.
4. On the due date, when the bank credits the cheque, record the receipt in the real **bank** journal, then settle the two against each other with an entry: debit the bank, credit *Post-dated cheques received*. If you import statements, match the incoming transaction against the open cheque line on the reconciliation screen instead (section 6.2) — same result, less typing.

You pay a vendor with a post-dated cheque: the mirror image. Register the payment with **PDC Issued**, print the cheque itself with the cheque formats (section 4.7), and when it is presented, debit *Post-dated cheques issued* and credit the bank.

TIP

The balance of each PDC account is then exactly the cheques in hand that have not cleared, and the General Ledger on that account is your cheque register. A cheque that bounces is handled by reversing the settlement entry, which puts the amount back on the PDC account — or by reopening the invoice if the customer has to pay again.

GOOD TO KNOW

One journal per direction is usually enough. Create one PDC journal per bank only if you need the cheques of each bank kept apart.

4.6 Recurring payments

Accounting › Recurring Payments, templates under **Configuration › Accounting › Recurring Templates**. For rent, leases, subscriptions and loan instalments — anything with the same amount on the same day each period.

1. Create a **template** with the lines of the entry: accounts, partner, amounts, analytic distribution.
2. Create the **recurring payment** from it: the journal, the start date, how often it repeats and until when.
3. Odoo generates the entries on schedule. With **Auto-Post Entries** they are posted as well; without it they wait in draft for you to check.

The screenshot displays the Odoo interface for a recurring payment template named 'RP004'. The top navigation bar includes 'Accounting', 'Dashboard', 'Customers', 'Vendors', 'Accounting', 'Review', 'Follow-Ups', 'Reporting', and 'Configuration'. The left sidebar shows 'New' and 'Recurring Payment RP004'. The main content area is divided into two sections: 'Recurring Template' and 'Recurring Entries'.

Recurring Template Details:

Field	Value
Recurring Template	Monthly - Posted
Partner	Gemini Furniture
Payment Type	Send Money
Amount	\$ 3,200.00
Currency	USD
Journal	Bank
Responsible	OdooBot
Start Date	Jan 1
End Date	Dec 31
Recurring Period	Months
Recurring Interval	1
Generate Journal As	Posted

Recurring Entries Table:

Date	Amount	Journal	Currency	Error	Status
Jan 1	\$ 3,200.00	Bank	USD		Done
Feb 1	\$ 3,200.00	Bank	USD		Done
Mar 1	\$ 3,200.00	Bank	USD		Done
Apr 1	\$ 3,200.00	Bank	USD		Done
May 1	\$ 3,200.00	Bank	USD		Done
Jun 1	\$ 3,200.00	Bank	USD		Done
Jul 1	\$ 3,200.00	Bank	USD		Draft
Aug 1	\$ 3,200.00	Bank	USD		Draft
Sep 1	\$ 3,200.00	Bank	USD		Draft

The right sidebar shows a chat window with OdooBot, indicating that a recurring payment was created at 6:27 AM.

A recurring payment and the entries it has generated.

4.7 Printing cheques

Configuration › Invoicing › Cheque Formats, then print from the vendor payment.

1. Pick the shipped format closest to your cheque — cheque on top, in the middle or at the bottom of an A4 or Letter page, or one of the cheque leaves (US, Canada, UK and Ireland, the Gulf, Australia and New Zealand).
2. Duplicate it and set the paper size and the position of every printed field in millimetres. The **preview** on the form shows a test print with sample values and follows every change.
3. Print the test page on plain paper, hold it against a real cheque, and correct with **Move Right** and **Move Down** until it lines up.
4. Set the finished format on the bank journal, under **Cheque Format**.
5. Pay a vendor with the *Checks* payment method, then **Print Checks**.

PREVIEW
The test print with sample values, updated as you change the format. Print it to check the positions on a real cheque.

A cheque format: every field positioned in millimetres, with a live preview.

TIP

Leave **Print the MICR Line** off when you print on the pre-printed cheques of your bank — the magnetic line is already on the paper. Turn it on only for blank cheque stock, and upload an E-13B font.

Bank and cash

5.1 Importing the statement

Accounting › Bank and Cash › Bank Statements › Import Statement, or the **Import Statement** action on the bank card of the dashboard.

1. Drop in the files your bank gives you. Each file is handed to the parsers in turn and read by the first one that recognises it, so you never have to say which format it is: **CAMT.053**, **MT940**, **OFX/QFX**, **QIF**, or **CSV and Excel**.
2. Leave the **Journal** empty if the file carries the bank account number: the right journal is found from it. A file imported into the journal of another account is refused.
3. For CSV and Excel, choose a **File Map**. Once it is set on the journal it is filled in automatically at every later import.
4. Import. Transactions already imported are skipped — the identifier the bank gives each transaction is kept — and the message tells you how many were new and how many were already there.

The import wizard: the files, the journal and the file map.

5.2 Building a file map for your bank

Configuration › Bank Statement File Maps. A map describes one bank's CSV or Excel export, once.

SETTING	WHAT TO PUT IN IT
Encoding, Delimiter, Text Delimiter	utf-8 and a comma for most banks; write <i>tab</i> for a TSV.
Decimal / Thousands Separator	Match how your bank writes 1,234.56 or 1.234,56 or 1 234,56.
Date Format	Python notation: %d/%m/%Y, %m/%d/%y, %Y-%m-%d.
Rows to Skip, Has a Header Row, Sheet	Skip the preamble many banks put above the table.
Amount, or Debit and Credit	One signed column, or two. Debit is Positive if your bank does not use a minus sign.
Label, Reference, Partner, Account Number, Currency, Notes, Unique ID	Name the columns by their header, or by their number when the file has none. The Unique ID column is what stops a re-import duplicating transactions.

5.3 Reconciling the bank

Accounting › Reconciliation › Bank Reconciliation, or the **Reconcile** button on the bank card of the dashboard.

1. Pick the journal and filter on **To Reconcile**. For the selected transaction, Odoo lists the open journal items most likely to be its counterpart, ranked by amount, reference, partner and direction.
2. If a suggestion is right, select it and **Validate**. You can match one item, several, or only part of an amount.
3. If nothing fits, search the open items yourself, or add a counterpart by hand with its account, label, partner, taxes and analytic distribution — bank charges and interest are done this way.
4. Apply a **reconciliation model** to fill the counterparts in from its lines for anything you do repeatedly.
5. Whatever is not covered stays on the suspense account, so nothing is ever lost.
6. Mark a transaction **to check** when you are unsure; it stays visible for a colleague.

The reconciliation screen: the transaction, its counterparts and the suggestions.

TIP

Let the automatic reconciliation do the repetitive part: reconciliation models with an automatic trigger, partner mapping models that fill in the partner of a new transaction, and the rule that reconciles a transaction matching exactly one open item by amount and reference. A scheduled action treats new transactions daily and runs again as soon as more are imported.

5.4 Match Journal Items

Accounting › Reconciliation › Match Journal Items. For everything that is not a bank transaction: an invoice paid by a credit note, an advance applied to a bill, two entries that cancel out.

1. The open items of the reconcilable accounts are listed, grouped by account and partner.
2. Select the items that belong together and press **Match**. The wizard shows the debit, the credit and the difference.
3. Write the difference off on a journal, account, date and label of your choice – or leave it, and the items are matched partially.
4. **Match Suggestions** reconciles, in one go, every group of items of the same account and partner whose amounts cancel each other.

Accounting Dashboard Customers Vendors Accounting Review Follow-Ups Reporting Configuration									
Match Journal Items									
Account > Partner Search...									
1-2 / 2									
	Date	Journal Entry	Account	Partner	Description	Due Date	Open Amount	Matching #	
All									
1			121000 Accounts Receivable	52 records			\$ 341,284.53		
2			211000 Accounts Payable	22 records			\$ -50,519.45		
							\$ 290,765.08		

Match Journal Items, grouped by account and partner.

5.5 Cash

A cash journal works the same way with two differences: **New Transaction** types the movements in by hand, and **New Statement** records the cash counted at the end of the day. Reconcile the counted amount against the movements so the till agrees with the books, then print the **Cash Book** (section 13.4).

Assets

6.1 Asset categories

Configuration › Accounting › Asset Categories. A category is a template: set it up once and every asset of that kind inherits it.

- **Asset account** — where the gross value sits.
- **Depreciation account** — the accumulated depreciation, on the balance sheet.
- **Expense account** — where the periodic charge is posted.
- **Journal** — usually the miscellaneous one.
- **Method** — linear or degressive, the number of depreciations and their period.
- **Prorata temporis** — start depreciating on the purchase date rather than the first of the period.

The screenshot shows the Odoo 20 Accounting › Asset Categories configuration page for 'Computer Hardware'. The page is divided into several sections:

- Asset Type:** Computer Hardware
- JOURNAL ENTRIES:**
 - Journal:** Miscellaneous Operations
 - Asset Account:** 151000 Fixed Assets
 - Depreciation Entries:** 151100 Accumulated Depreciation
 - Expense Account:** 613000 Depreciation Expense
 - Analytic Distribution:**
- PERIODICITY:**
 - Time Method Based On:** Number of Entries (selected), Ending Date, Depreciation Rate
 - Number of Entries:** 3
 - One Entry Every:** 12 months
- ADDITIONAL OPTIONS:**
 - Auto-Confirm Assets:** ☐
 - Assets from Bills on the Asset Account:** ☐
 - One Asset per Unit:** ☐
 - Depreciation Dates:** Manual (Defaulted on Purchase Date)
- DEPRECIATION METHOD:**
 - Computation Method:** Linear (selected), Degressive, Degressive then Linear
 - Prorata Temporis:** ☐

On the right side, there is a chat window with a message from OdooBot: "Asset category created".

An asset category: the accounts, the journal and the method every asset of that kind inherits.

6.2 Creating an asset

1. **Accounting › Assets › New:** name, category, purchase value and date. The board is computed as you type.
2. Or let the vendor bill do it: put the asset category on the bill line and confirm the bill — the asset is created and linked to it.

3. Check the **depreciation board**: one line per period with its date, amount and remaining value.
4. **Confirm** the asset to put it in service.

Date	Label	Depreciation	Cumulative D...	Depreciable V...	Journal Entry	Status
Mar 1, 2024	Delivery Van - Ford Transit: Depr...	\$ 8,400.00	\$ 8,400.00	\$ 33,600.00	MISC/2024/0...	Posted
Mar 1, 2025	Delivery Van - Ford Transit: Depr...	\$ 8,400.00	\$ 16,800.00	\$ 25,200.00	MISC/2025/0...	Posted
Mar 1	Delivery Van - Ford Transit: Depr...	\$ 8,400.00	\$ 25,200.00	\$ 16,800.00	MISC/2026/0...	Posted
Mar 1, 2027	Delivery Van - Ford Transit: Depr...	\$ 8,400.00	\$ 33,600.00	\$ 8,400.00	/	Draft
Mar 1, 2028	Delivery Van - Ford Transit: Depr...	\$ 8,400.00	\$ 42,000.00	\$ 0.00	/	Draft

An asset with its depreciation board.

6.3 Posting depreciation

Each board line is posted in its period, either by the scheduled action or with **Create Move** on the line. The entry debits the expense account and credits the accumulated depreciation.

When an asset is sold or scrapped, use **Sell or Dispose**: the remaining value is written off and the asset is closed.

6.4 Assets that already existed

For an asset bought before you went live, create it with its **original purchase value and date**, then set the depreciation already posted so that only the remaining value depreciates in Odoo. The opening entry (section 3.2) carries the gross value and the accumulated depreciation on the balance sheet; the asset record only drives what happens from now on.

6.5 Asset reports

Reporting › Management › Depreciation Schedule gives the gross value, the depreciation of the period and the closing values, category by category — the schedule an auditor asks for. **Asset Analysis** is the same data in pivot and graph form.

Depreciation Schedule

Period: 01/01/2026 - 09/20/2026
Currency: USD

Movement by Category

	Computer Hardware	Office Furniture	Vehicles	Total
Cost				
At 01/01/2026	18,600.00	41,300.00	42,000.00	101,900.00
Additions	9,400.00	-	-	9,400.00
Disposals	-	-	-	-
At 09/20/2026	28,000.00	41,300.00	42,000.00	111,300.00
Accumulated depreciation				
At 01/01/2026	(6,200.00)	(13,160.00)	(16,800.00)	(36,160.00)
Charge for the period	(9,333.33)	(8,260.00)	(8,400.00)	(25,993.33)
Disposals	-	-	-	-
At 09/20/2026	(15,533.33)	(21,420.00)	(25,200.00)	(62,153.33)
Net book value				
At 01/01/2026	12,400.00	28,140.00	25,200.00	65,740.00
At 09/20/2026	12,466.67	19,880.00	16,800.00	49,146.67

The depreciation schedule.

Budgets

7.1 Budgetary positions

A budgetary position is a named group of accounts — “Operating expenses”, “Product sales” — and it is what a budget line is measured against. Create them first, under **Configuration › Accounting**, and put the relevant accounts in each.

7.2 Creating a budget

1. **Accounting › Budgets › New**: a name, the responsible, and the period the budget covers.
2. Add the lines: a budgetary position, an analytic account if you budget that way, and the planned amount.
3. Choose whether the line is **spread over the period** or expected in full on a planned date — this is what makes the theoretical amount meaningful.
4. **Confirm** the budget. Its lines are locked from then on, and the figures start filling in.

Each line then shows the **planned** amount, the **theoretical** amount expected by today, the **actual** amount posted, and the **achievement** as a percentage.

A budget with its lines, the amounts achieved and the totals of the period.

7.3 Following a budget

- The **Over Budget** filter shows the lines that have gone past their plan.
- The responsible is notified when a line reaches the share set in the settings, and gets a To-Do activity when it goes over.

- **Budget vs Actual** prints the comparison; **Reporting › Management › Budget Analysis** gives it in pivot, list and graph.
- **Copy to Next Period** carries a budget forward; the lines can be split by month or by quarter.

Period: 01/01/2026 - 12/31/2026
Status: Validated
Responsible: Mitchell Admin

The Budget vs Actual PDF.

7.4 Stopping the overspend

Vendor bills that would push a line over its plan always show a warning banner. Turn on **Block Documents Over Budget** in the settings and posting one is refused for everyone but an accounting manager, with the offending lines named in the message.

7.5 Budget control of purchase orders

GOOD TO KNOW

Separate module. This section needs *Odoo 20 Budget Management - Purchase* (`om_account_budget_purchase`), which this app does not install. It is free on the Odoo Apps store: download it into your addons path and update the apps list — it installs itself as soon as Purchase and the budgets are both present, or install it by hand from **Apps**.

With it installed you get:

- A **Committed** column on every expense line of a confirmed budget: what the confirmed purchase orders have already promised and not yet billed. As the bills come in, the amount moves from Committed to Actual by itself.
- A warning banner on the purchase order, while it is still a quotation, naming the budget lines it would push over.
- With the blocking option on, confirming such an order is refused for anyone but an accounting manager.

Orders in a foreign currency are converted at the rate of the day the order was approved, and a refund on a bill gives the quantity back to the committed amount.

Getting paid: follow-ups

8.1 Follow-up plans

Configuration › Invoicing › Follow-up Plans. A plan is a ladder of levels, each triggered a number of days after the due date.

1. Create the levels: 7 days — a reminder email; 21 days — a firmer letter; 45 days — a phone call activity; 60 days — send to legal.
2. For each level choose what happens: send an email, print a letter, raise an activity, or simply mark the customer.
3. Write the message on the level. The customer statement can be attached so the customer sees exactly what is open.

Due Days	Follow-Up Action	Email Template	Send an Email	Send a Letter	Manual Action
15	Send first reminder email	First polite payment follow-up reminder email	☒	☒	☐

A follow-up plan and its levels.

8.2 Working the list

Follow-Ups › Follow-ups. One line per customer with something overdue.

1. Open a customer to see every open invoice, how late each one is, and the total owed.
2. Act on the level Odoo proposes, or override it.
3. Record a **promise to pay** with a date: the customer drops off the list until that date.
4. Mark an invoice **disputed** so it stops driving reminders while it is argued about.
5. **Exclude** a customer you never want chased automatically.
6. **Send All Reminders** processes the whole list in one go.

Customer Statement

Date
09/20/2026

Dear Globex Industries,

We are disappointed to see that despite sending a reminder,
that your account is now seriously overdue.

It is essential that immediate payment is made, otherwise we
will have to consider placing a stop on your account which
means that we will no longer be able to supply your company
with (goods/services).

Please, take appropriate measures in order to carry out this
payment in the next 8 days.

If there is a problem with paying invoice that we are not aware
of, do not hesitate to contact our accounting department, so
that we can resolve the matter quickly.

Details of due payments is printed below.

Best Regards,

Date	Document	Reference	Due Date	Days Overdue	Amount	Open Amount
09/10/2026	INV/2026/00043	PO-23331	08/17/2026	34	\$ 8,490.32	\$ 8,490.32

Page 1 / 2

Cash forecast

9.1 Expected items

Accounting › Cash Forecast Items. Everything you know is coming but that no document holds yet: salaries, rent, loan instalments, taxes, a subsidy on its way.

- A **receipt** or a **payment**, with its amount, currency, date and partner.
- Once, or every week, month, quarter or year, until a date or without end.
- A monthly item dated the 31st stays at the end of each month, whatever its length.
- Archive an item that no longer applies rather than deleting it.

9.2 Running the forecast

Reporting › Management › Cash Forecast.

1. Choose the start date, **by weeks or by months**, and how many periods (up to 60).
2. Decide what to do with invoices and bills that are already due: give them their own **Overdue** column, or leave them out.
3. Include the draft invoices and bills for the worst case, and detail the rows by partner if you want to see who owes what.
4. Print it as a PDF, or export it to Excel with the Accounting Excel Reports module.

The forecast starts from the bank and cash balance of today and adds, period by period, the customer invoices, the recurring receipts and the expected receipts, less the vendor bills, the recurring payments and the expected payments, to a closing balance.

2026-09-20 05:51

Total receipts	227,605.39	59,060.04	36,888.22	23,235.13	6,495.75	-	-	353,284.53
Payments								
Vendor bills	-42,719.87	-	-7,799.58	-	-	-	-	-50,519.45
Recurring payments	-13,950.00	-	-5,550.00	-4,650.00	-4,650.00	-	-	-28,800.00
Other expected payments	-	-42,000.00	-56,550.00	-47,950.00	-53,350.00	-56,550.00	-47,950.00	-304,350.00
Total payments	-56,669.87	-42,000.00	-69,899.58	-52,600.00	-58,000.00	-56,550.00	-47,950.00	-383,669.45
Net cash flow	170,935.52	17,060.04	-33,011.36	-29,364.87	-51,504.25	-56,550.00	-47,950.00	-30,384.92
Closing balance	224,934.13	241,994.17	208,982.81	179,617.94	128,113.69	71,563.69	23,613.69	

The balance is the one of the Bank and Cash accounts. The invoices and bills are expected on their due date; the payments registered but not reconciled with the bank yet are expected on their date.

The cash forecast: opening balance, receipts, payments and closing balance by month.

Currencies

10.1 Multi-currency basics

Turn on **Multi-Currencies** in the settings and activate the currencies you trade in. Every foreign currency document keeps its own amount and its value in the currency of the company at the rate of its date.

10.2 Rates that update themselves

Configuration › Settings › Automatic Currency Rates.

1. Choose how often: manually, daily, weekly or monthly.
2. Choose the **source**: Frankfurter or the European Central Bank (about thirty major currencies, no key), Open Exchange Rates (every currency, with an App ID) or ExchangeRate-API (with a key).
3. Add a **backup source** for the currencies the main one does not quote, or for the days it does not answer.
4. Limit it to the currencies you care about, and set a **Maximum Change** so an absurd rate is reported instead of saved.
5. **Test Connection** checks the source and shows a few rates without saving anything; **Update Now** fetches them at once.

Each rate keeps the name of the source it came from; the ones you type in yourself stay blank. After three failures in a row the accounting managers are notified.

The screenshot shows the Odoo Accounting Settings interface. The top navigation bar includes Accounting, Dashboard, Customers, Vendors, Accounting, Review, Follow-Ups, Reporting, and Configuration. The left sidebar has 'General Settings' and 'Accounting'. The main content area is titled 'Accounting' and 'Currencies'.

Maximum Change (%)	0.00

This source quotes about 30 major currencies, without key. For every currency, choose Open Exchange Rates (App ID from openexchangerates.org) or ExchangeRate-API as source or backup.

Test Connection Update Now

Currency Revaluation
Restate the open foreign currency balances at the rate of a chosen date: the difference is posted on these accounts as an unrealized gain or loss.

Currency	Miscellaneous Oper...	→
Revaluation Journal		
Unrealized Gain Account	752000 Unrealized ...	→
Unrealized Loss Account	652000 Unrealized ...	→

☒ Reverse the adjustment at the start of the next period

The automatic rates and the revaluation accounts, in the accounting settings.

10.3 Revaluating at the closing rate

Configuration › Closing › Currency Revaluation, at the end of each period.

1. Set the journal and the unrealized gain and loss accounts once, in the settings.
2. Open the wizard, choose the date — usually the last day of the period — and the currencies, or leave them empty for all of them.
3. The lines are computed as you type: for each account, partner and currency, what is open in the foreign currency, what it is worth in the books, what it is worth at the rate of that date, and the difference.
4. **Post Adjustment** writes one entry for the whole difference, and reverses it at the start of the next period unless you say otherwise.

Receivable and payable accounts are revalued on what is left open on them, invoice by invoice; accounts held in a foreign currency, such as a foreign bank account, on the balance they hold. A date can be revalued only once.

Currency Revaluation

What is still open in a foreign currency is restated at the rate of the revaluation date. The difference is posted as one adjustment entry and reversed at the start of the next period, since nothing is gained or lost until the invoices are paid.

Revaluation Date ? Sep 20

Currencies ? e.g. USD (all the other currencies by default)

Journal Miscellaneous Operations

Post Adjustment

Cancel

The revaluation, account by account, with the adjustment of each line.

Closing the books

11.1 Lock dates

Configuration › Closing › Lock Dates. The simplest and strongest control in the suite.

LOCK	EFFECT
Journal Entries Lock Date	Nobody but an accounting manager can post or change anything on or before this date.
All Users Lock Date	Nobody at all, managers included. Use it once a period is filed.
Tax Return Lock Date	Nothing that would change a filed tax return can be touched.

TIP

Move the lock date forward every month as soon as the period is reconciled and reported. It costs nothing and it is the difference between a set of books that stays correct and one that quietly changes underneath you.

The lock dates.

11.2 Closing a period

Configuration › Closing › Period Closing. The monthly routine:

1. Post everything: invoices, bills, payments, payroll, depreciation, recurring entries.

2. Import and reconcile every bank and cash statement to the last day of the period.
3. Revalue the foreign currency balances (section 10.3).
4. Check the suspense accounts are empty and the open items make sense.
5. Run the Trial Balance and the Balance Sheet and compare them with last period.
6. File the tax report and set the tax lock date.
7. Close the period and move the lock date forward.

August 2026

Start Date: Aug 1 When Closed: Lock the sales and purchases
End Date: Aug 31 Checked On: Sep 20, 6:30 AM

Checklist

Name	Count	Responsible	Done By	Status
Draft entries dated up to the end of the period	0			OK
Bank transactions not reconciled	3			Warning Open
Payments and suspense items not matched	3			Warning Open
Bank and cash accounts with a negative balance	0			OK
Bills that might be duplicates	0			OK
Invoice the goods delivered and the services provided in the period			OdooBot	Done Undo
Record the vendor bills received for the period			OdooBot	Done Undo
Reconcile the bank and cash accounts with their statements			OdooBot	Done Undo
Match the payments with their invoices and review the aged receivables and pa...			OdooBot	Done Undo
Record the accruals of the expenses not billed yet			OdooBot	Done Undo
Adjust the prepaid expenses and the revenue received in advance				To Do Done
Post the depreciation of the fixed assets				To Do Done
Record the payroll with the salaries, social charges and taxes payable				To Do Done

Chat window: OdooBot 6:30 AM: Period Closing created

Period closing.

11.3 Closing a year

Configuration › Closing › Year-End Closing. After the last period of the year is closed and your accountant's adjustments are posted, the year-end entry carries the result of the year to the retained earnings account and opens the next year. **Closing Tasks** keeps the checklist of what remains.

PART 12

The reports

12.1 Where they are

Every report of this suite is under **Reporting**, grouped the way an accountant thinks:

The Reporting menu: statement reports, partner reports, tax, audit reports, daily reports and management.

Each one opens a wizard with the same three questions — which **period**, which **journals or accounts**, and **posted entries only or all entries** — then prints a PDF. With *Enhanced Financial Reports* on, you can preview them on screen instead of downloading.

12.2 Statement reports

REPORT	WHAT IT ANSWERS
Balance Sheet	What the company owns and owes at a date, with comparison.
Profit and Loss	What it earned and spent over a period.
Cash Flow Statement	Where the cash came from and went, operating, investing and financing.

2026-09-20 06:59	My Company	1 / 1	2026-09-20 06:59	My Company	1 / 1

251000 Tax Received	\$ 6,262.50		630000 Salary Expenses	\$ -4,383.27	
Equity	\$ 260,096.89		961000 RD Expenses	\$ -7,925.08	
Capital and Reserves	\$ 0.00		962000 Sales Expenses	\$ -3,755.66	
Profit (Loss) to report	\$ 260,096.89				

The Balance Sheet and the Profit and Loss.

12.3 Partner and audit reports

REPORT	WHAT IT ANSWERS
Partner Ledger	Every movement on one customer or vendor, with the running balance.
Aged Partner Balance, Aged Receivable, Aged Payable	How old the open balances are, in buckets.
General Ledger	Every entry of every account for the period.
Trial Balance	Opening, movements and closing per account — the first thing to run when something does not add up.
Journals Audit	The entries of each journal in posting order, with the tax detail.
Tax Report	The tax collected and paid for the period, ready for the return.

12.4 Daily reports

Reporting › Daily Reports. The three books a bookkeeper prints every day.

- **Day Book** — every journal item of the period, grouped under the date it was posted on, with a total per day.
- **Cash Book** — the movements of the cash accounts with a running balance; the accounts of the cash journals are preselected.
- **Bank Book** — the same for the bank accounts, to hold against the statement.

Cash Book and Bank Book can carry an **initial balance** row, sort by date or by journal and partner, and show all accounts, only those that moved, or only those with a balance.

The Day Book, with the total of each day.

12.5 Dashboards

The **Dashboards** application carries eight accounting dashboards in its Finance section: Accounting Overview, Profit and Loss, Balance Sheet, Receivables and Payables, Bank and Cash, Assets, Budgets, and Follow-ups and Cash Forecast.

They work over the period you choose, compare it with the same period last year or the one before, and add up the companies picked in the switcher. All of them are computed from account types, so they work with any chart of accounts. The formula `OM.ACCOUNT.BALANCE` gives you the same figures in any spreadsheet of your own.

The Accounting Overview dashboard.

Routines

13.1 Every day

- ✓ Enter and confirm the customer invoices and the vendor bills of the day.
- ✓ Register the payments you know about.
- ✓ Import the bank statement and reconcile what the suggestions get right.
- ✓ Count the till, record the cash statement, reconcile it.
- ✓ Print the Day Book if your bookkeeping requires a daily record.

13.2 Every month

- ✓ Post payroll, depreciation and any accruals.
- ✓ Check the recurring payments generated what they should have.
- ✓ Reconcile every bank and cash journal to the last day of the month.
- ✓ Empty the suspense accounts.
- ✓ Revalue the foreign currency balances.
- ✓ Run the Trial Balance, the Balance Sheet and the Profit and Loss; compare with last month.
- ✓ Review the aged receivable and send the follow-ups.
- ✓ Check the budgets for lines going over.
- ✓ File the tax return, set the tax lock date.
- ✓ Close the period and move the lock date forward.

13.3 Every year

- ✓ Close all twelve periods.
- ✓ Post your accountant's adjustments.
- ✓ Check the depreciation schedule against the asset accounts.
- ✓ Confirm the physical inventory and the stock valuation if you hold stock.
- ✓ Run the year-end closing entry and open the new year.
- ✓ Set the All Users Lock Date on the closed year.

PART 14

When something looks wrong

14.1 The usual suspects

SYMPTOM	WHERE TO LOOK
A report is empty or missing accounts	The account type is wrong. Every report here is built from types, not codes.
The balance sheet does not balance	Run the Trial Balance for the same dates. An unbalanced result almost always means an entry posted to a period you are not printing, or an opening entry that was never balanced.
An account will not appear in Match Journal Items	Allow Reconciliation is off on the account.
A bank transaction cannot be reconciled	It is already reconciled, or another user has it open: a transaction being reconciled is locked so two people cannot match it twice.
The suspense account keeps growing	Transactions were validated without a full counterpart. Filter the journal items on the suspense account and finish them.
A statement file is refused	The format is not one of the six supported, or — for CSV and Excel — the file map does not match the file. Check the date format and the decimal separator first.
Importing the same file brings nothing in	Correct: the transactions were already imported. The message says how many were skipped.
A payslip, invoice or entry cannot be posted	A lock date covers its date. Only an accounting manager can post before the journal entries lock date, and nobody before the all users lock date.
The rates stopped updating	Open the settings and read Last Update Result , then press Test Connection . A paying source with an expired key fails silently otherwise.
A revaluation is refused	That date is already revalued. Reverse or delete the existing adjustment entry first.
A vendor bill or purchase order will not confirm	It goes over budget and blocking is on. Ask an accounting manager, or raise the budget.

14.2 Getting help

Every module in this suite is free and open source under LGPL-3. If something is wrong, or you need a feature that is not here, write to **odoomates@gmail.com** — and if you can, contribute the fix back so the next person gets it too.
